2.,		tstock	- 30 Lay to	o 5 June					
	b.								
		The following details have been observed in connection with the presumed early warning set at Altengrabow: Subsequent to the dismantling of the mast from the top of the vehicle, the equipment reappeared with the dipoles lengthened. A rough estimate gives the total length of dipole now as thirty cms. There are two rows of seven dipoles on the top frame, none on the bottom.
